Orange: injected fault (fires once, on one node)
R-incorrect, R-stale, R-timeout
R-malicious, R-ipi
P-malicious
E-timeout
Task
client, tickers, sector, budget
Researcher
one per ticker
lookup_stock, get_news
Planner
JSON steps with `uses` report ids
Executor
one call per step
buy, set_stop_loss, ...
World state
cash, positions, stop-loss, KYC, files, external (irreversible)
Verifier (always-verify baseline)
checks each report and the plan; regenerates on FAIL
Provenance trace: every result is a Node tagged with its sources
edges: message (research > plan > exec) | declared `uses` | shared-state read-after-write
